Design Services

Rigado has an experienced team of software, electrical, and mechanical engineers that provide solutions to today's technological challenges. Whether you need a network of industrial sensors, or a complete product ready for mass production; Rigado can turn your ideas into reality.

SoftDevices

The BMD-350 fully supports Nordic Semiconductor RF protocol stacks known as SoftDevices. They integrate a Bluetooth v4.2 LE controller and host, and provide a full and flexible API for building Bluetooth low energy technology System on Chip (SoC) solutions.

Secure Bootloader

Encrypted Over-The-Air (OTA) and UART firmware updates add a layer of security to your application. The BMD-350 RigDFU bootloader uses AES-128 encryption allowing for secure updates of your application firmware, bootloader, and SoftDevice.

BMDware

The BMD-350 comes standard with BMDware, providing iBeacon and UART Bridge functions without needing to program the module. Fully configurable over LE and the UART for end-user or factory provisioning. Direct Test Mode (DTM) via UART is enabled to allow production Bluetooth RF testing with no configuration.
